University of Pune

Two Year M. Sc. Degree Course in Chemistry

M. Sc. Chemistry

(Credit and Semester based Syllabus to be implemented from Academic Year 2013-14)
1) **Title of the Course:** M.Sc. Chemistry

2) **Preamble of the Syllabus:**

Master of Science (M.Sc.) in Chemistry is a post graduation course of University of Pune. The credit system to be implemented through this curriculum, would allow students to develop a strong footing in the fundamentals and specialize in the disciplines of his/her liking and abilities.

The students pursuing this course would have to develop in depth understanding of various aspects of the subject. The conceptual understanding, development of experimental skills, designing and implementation of novel synthetic methods, developing the aptitude for academic and professional skills, acquiring basic concepts for structural elucidation with hyphenated techniques, understanding the fundamental biological processes and rationale towards computer assisted drug designing are among such important aspects.

3) **Introduction:**

**Salient Features of the Credit System:**

1. Master’s degree course in Chemistry would be of 100 credits, where one credit course of theory will be of one clock hour per week running for 15 weeks and one credit for practical course will consist of 15 of laboratory exercise including the revision and setting up the practical. Thus, each credit will be equivalent to 15 hours.

2. Student will have to take admission in Chemistry Department and complete 75 credits incorporated in the syllabus structure of Chemistry. The remaining 25 credits shall be chosen from courses offered by the Chemistry Department or other Departments of the University/College with credit system structure.

3. Except practical credits wherever applicable, students may be allowed to complete less courses per semester on the condition they complete the degree in maximum of four years. This facility will be available subject to the availability of concerned courses in a given semester and with a maximum variation of 25 credits (in case of fresh credits) per semester.

4. Every student shall complete 100 credits in a minimum of four semesters. All Semesters will have average 25 credits each.

5. The student will be declared as failed if s/he does not pass in all credits within a total period of four years. After that such students will have to seek fresh admission as per admission rules prevailing at that time.

6. Academic calendar showing dates of commencement and end of teaching, internal assessment tests and term end examination will be prepared and duly notified before commencement of each semester every year.

7. Project course should not be greater than 5% of the total credits of the degree course. Project course is equivalent to 4 credits.
Instructions for the Students

The students seeking admission to M.Sc. Chemistry course is hereby informed that they are supposed to adhere to the following rules:

1. A minimum of 75 % attendance for lectures / practical is the pre-requisite for grant of term.
2. There shall be tutorial / practical / surprise test / home assignment / referencing of research papers / seminar / industrial visits / training course as a part of internal assessment in each semester. The students are supposed to attend all the tests. The students should note that re-test will not be given to the student absent for the test/s.
3. The students opting for dissertation course shall follow the rules framed for the same.
4. Industrial / Institute - Visit and or Industrial Workshops / Laboratory Workshops / Training Programme is a compulsory component of the syllabus. The students are supposed to attend all the Industrial Workshops / Laboratory Workshops / Training Programme organized by the department. The students shall attend these programs at their own cost.

4) Eligibility:

The candidate should have a B.Sc. degree with Chemistry as principal subject OR B.Sc. (General) degree with Chemistry (Electronics) as one of the subsidiary subjects.

Admission: Admissions will be given as per the selection procedure / policies adopted by the respective college, in accordance with conditions laid down by the University of Pune. Reservation and relaxation will be as per the government rules.

5) Examination

[A] Pattern of Examination

Evaluation of Students:

1) The In-semster and End-Semester examinations will be of 50 marks each.
2) Student has to obtain 40% marks in the combined examination of In-Semester and End-Semester assessment with minimum passing of 30% passing in both assessments separately.
3) A student cannot register for third semester if s/he fails to complete the 50% credits of the total expected within two semesters.
4) Internal marks will not change. Student cannot repeat internal assessment. If student misses internal assessment examination, s/he will have second chance with the permission of the concerned teacher. But it will not be right of the student. It will be the discretion of the concerned teacher and internal departmental assessment committee. In case s/he wants to repeat Internal, s/he can do so only by registering for the said courses during 5th/6th semester whichever is applicable.
5) There shall be revaluation of answer script of end semester examination, but not of internal assessment papers.
6) Internal assessment answer scripts may be shown to the concerned student but not end semester answer script.
i. **In-semester Examination**: Internal assessment for each course would be continuous and dates for each tutorials/practical tests will be pre-notified in the time table for teaching or placed separately as a part of time table. Department / College Internal Assessment Committee will coordinate this activity

a) **Theory Courses**: Conducting written tests should not be encouraged. More focus should be on non-written tests. Students should be encouraged to conduct various academic activities. A teacher must select a variety of the procedures for internal assessment suggested as follows.
   a) Mid-term test
   b) On-line test
   c) Computer based examination
   d) Open book test (concerned teacher will decide the allowed books)
   e) Tutorial
   f) Surprise test
   g) Oral
   h) Assignments
   i) Review of research paper
   j) Seminar presentation
   k) Journal/Lecture/Library notes

   Student has to preserve the documentation of the internal assessment except midterm test answer script. It is the responsibility of the student to preserve the documents.

b) **Practical Courses**: It is a continuous evaluation process. Practical courses will be evaluated on the basis of the following
   1. Performance assessment of each experiment on the basis of attendance, punctuality, journal completion, practical skills, results, oral and analysis.
   2. Test on practical may be conducted before the end-semester examination.
   3. Assessment of each experiment shall be done for each practical weekly.
   4. Assessment of the Activity will be based on any one of the following per practical course.
      i. Experimental and analytical skills
      ii. Synthesis of compounds
      iii. Evaluation of physical constants, purity of compounds
      iv. Fundamental understanding of instrumental techniques
      v. Recording and analysis of spectral data
      vi. Economic utilization of chemicals
      vii. Basic understanding of the experiment

   The student strength of practical batch should be eight. Note that one practical session of 4 hour duration of one practical batch.

**Project Course**: Project will be evaluated by In-Charge of project batch in concern with project guide. Assessment will be done weekly in the respective batch. Evaluation will be on the basis of weekly progress of project work, progress report, referencing, oral, results and documentation.
ii. **End-Semester Examination**: End-Semester examination for 50 marks per course would be held about two weeks after completion of teaching for the semester. Paper setting and assessment for a particular course would be the responsibility of the course In-charge, and these activities would be coordinated by the Department Examination Committee. The Department Examination committee would undertake preparation of the result-sheets for the student.

[B] **Standard of Passing**

Student has to obtain 40% marks in the combined examination of In-Semester and End-Semester assessment with minimum passing of 30% passing in both assessments separately.

[C] **ATKT Rules**

A student cannot register for third semester if s/he fails to complete the 50% credits of the total credits expected to be ordinarily completed within two semesters.

[D] **Award of Class**

Grades will be awarded from grade point average (GPA) of the credits.

**GPA Rules:**

1. The formula for GPA will be based on Weighted Average. The final GPA will not be printed unless a student passes courses equivalent to minimum 100 credit hours (Science). Total credits hours means the sum of credit hours of the courses which a student has passed.

2. A seven point grade system [guided by the Government of Maharashtra Resolution No. NGO – 1298 / [4619] / UNI 4 dt. December 11, 1999 and University regulations] will be followed. The corresponding grade table is attached herewith.

3. If the GPA is higher than the indicated upper limit in the third decimal digit then the student be awarded higher final grade (e.g. a student getting GPA of 4.492 may be awarded ‘A’)

4. For Semester I, II, III examinations, only the grade points will be awarded for each subject. Final GPA along with final grade will be awarded only at the end of IV semester. There is also a provision for verification and revaluation. In case of verification, the existing rules will be applicable. The revaluation result will be adopted if there is a change of at least 10% marks and in the grade of the course.

5. After the declaration of result, for the improvement of Grade, the student can reappear for the examination of 30 credits worth theory courses.

6. Grade improvement programme will be implemented at the end of the academic year. A student can opt for grade improvement programme only after the declaration of final semester examination i.e. at the end of next academic year after passing M.Sc. (Chemistry) examination and within two years of completion of M.Sc. (Chemistry). A student can appear for grade improvement programme only once.
Common Formula for Grade Point Average (GPA):

\[
GPA = \frac{\text{Total of Grade Points earned} \times \text{Credit hours for each course}}{\text{Total Credit hours}}
\]

</tbody>
</table>

B Grade is equivalent to at least 55% of the marks

[E] **External Students**: There shall be no external students.

[F] **Setting of Question Paper / Pattern of Question Paper**

For core (compulsory) theory courses, end semester question papers set by the University of Pune and centralized assessment for theory papers done as per the University instructions. Questions should be designed to test the conceptual knowledge and understanding of the basic concepts of the subject.

Theory examination will be of 2 hours duration for each theory course of 5 credits. There will be **two sections** for each paper. Each section will be of **25 marks** and the pattern of question paper shall be:

<table>
<thead>
<tr>
<th>Question 1 (10 Marks)</th>
<th>5 compulsory sub-questions, each of 2 marks; answerable in 2-3 lines</th>
</tr>
</thead>
<tbody>
<tr>
<td>Question 2 (10 Marks)</td>
<td>2 out of 4 – short answer type questions of 5 marks each; answerable in 8 – 10 lines</td>
</tr>
<tr>
<td>Question 3 (5 Marks)</td>
<td>1 out of 2 – numerical problem type question; note, spectral analysis, functioning of instrumental technique with components</td>
</tr>
</tbody>
</table>
[G] Verification / Revaluation

There is also a provision for verification and revaluation. In case of verification, the existing rules will be applicable. The revaluation result will be adopted if there is a change of at least 10% marks and in the grade of the course. There shall be revaluation of answer script of end semester examination, but not of internal assessment papers.

6) Structure of Course

Basic structure/pattern (Framework) of the proposed postgraduate syllabus for the two year integrated course leading to M.Sc. (Chemistry) in the colleges affiliated to Pune University.

a) Compulsory Papers

Theory:  CHP-110, CHP-210, CHI-130, CHI-230, CHO-150, CHO-250, CHA-290

Practical:  CHP-107, CHI-147, CHO-247

8) **University Terms:**

Dates for commencement and conclusion for the first and second terms will be declared by the University authorities. Terms can be kept by only for duly admitted students. The term shall be granted only on minimum 75 percent attendance at theory and practical course and satisfactory performance during the term.

9) **Qualification of Teacher:**

i. M.Sc. (Chemistry) degree with NET/SET qualification.
ii. Recognition of Pune University as a post graduate teacher, by papers.
iii. Other criteria as per the guidelines of UGC and University of Pune.
M. Sc. Chemistry Part-I

Physical Chemistry

Semester - I

CHP-110: Fundamentals of Physical Chemistry (4 Credits)

SECTION-I (2 Credits, 24 L, 6 T)

1. Chemical Thermodynamics (10 L)

Recapitulation- Gibbs and Helmholtz energy.

Differential forms of internal energy, enthalpy, Helmholtz energy and Gibbs energy, Maxwell relations, dependence of Gibbs and Helmholtz energies on pressure, volume and temperature. Gibbs-Helmholtz equation, Gibbs energy of a reaction mixture. Chemical potential, Calculation of Gibbs energy and entropy of mixing for ideal gases. Expressing Chemical equilibrium in an ideal gas mixture in terms of chemical potential. Change in Gibbs free energy for a reaction, Equilibrium constant for a mixture of ideal gases, Variation of $K_p$ with temperature. Numericals. (pages 113-133 of ref. 2)

2. Quantum Chemistry (14 L)

Failures of classical mechanics, black body radiation, photoelectric effect, specific heats of solids, Atomic spectra, wave particle duality, uncertainty principle, wave function and its interpretation, well behaved functions, orthonormal functions, Linear and hermitian operators, Schrödinger equation, particle in a box, degeneracy, quantum mechanical harmonic oscillator (no derivation), sketching of wavefunction and its square, quantum tunneling, Bohr correspondence principle, hydrogen-like atoms (no derivation), atomic orbitals.

(Reference 1-3)
SECTION-II (2 Credits, 24 L, 6 T)

Chemical kinetics and reaction dynamics (24 L)

i) Recapitulation-zero, first, second, third, n\textsuperscript{th} order rate equation, molecularity and how to determine order of reaction, fractional order reactions. (2 L)

ii) Complexities in simple kinetics – Reversible reactions (cases dealing with first order opposed by first and second order; second order opposed by first or second order etc.), parallel (side) reactions, consecutive (sequential) reactions, principle of microscopic reversibility, steady state approximation, elucidating mechanism using SSA. (10 L)

iii) Theories of Reaction Rates: Arrhenius theory, collision theory and transition state theory, enthalpy, free energy and entropy of activation, correlation of steric factor in collision theory and entropy of activation. (7 L)

iv) Enzyme catalysis: Michaelis-Menten mechanism, limiting rate, Lineweaver Burk and Eadie plots, enzyme inhibition, competitive, partially competitive and Non-competitive inhibition. (Reference 4) (5 L)

References

Inorganic Chemistry
Semester - I

CHI-130: Molecular Symmetry & Chemistry of p-block elements (4 credits)

SECTION-I: Molecular Symmetry and its Applications

(2 Credits, 24 L, 6 T)

(a) Definitions and Theorems of Group Theory: Defining properties of a group, group multiplication table, some examples of group, subgroups, classes

(b) Molecular Symmetry and Symmetry Groups: Symmetry elements and operations, Symmetry planes and reflections, the inversion centre, proper axes and proper rotations, improper axes and improper rotation, products of symmetry operations, equivalent symmetry elements and equivalent atoms, general relations symmetry elements and symmetry operations, symmetry elements and optical isomerism, symmetry point groups, classes of symmetry operations, classification of molecular point groups.

(c) Representations of Groups: Matrix representation and matrix notation for geometric transformation, The Great Orthogonality Theorem and its consequence, character tables (No mathematical part)

(d) Group theory and quantum mechanics: Wave function as basis for irreducible representations

(e) Symmetry Adapted Linear Combinations: Projection operators and their use of construct SALC (Construction of SALC for sigma bonding for molecules belonging point groups: D_{2h}, D_{3h}, D_{4h}, C_{4v}, T_d, Oh, normalization of SALC.

(f) Molecular Orbital Theory: Transformation properties of atomic orbital, MO’s for Sigma bonding AB_n molecules, tetrahedral AB_4 and Oh AB_6 cases.

References:

Section-II: Chemistry of Main group elements

(2 Credits, 24 L, 6 T)

1. Hydrogen and its compounds: Hydrides: Classification, electron deficient, electron precise and electron rich hydrides. PH₃, SbH₃, AsH₃, Selenides, Tellurides

2. Alkali and alkaline earth metals: Solutions in non-aqueous Media, Application of crown ethers in extraction of alkali and alkaline earth metals

3. Organometallic Compounds of Li, Mg, Be.: Classification, Synthesis, Properties, Uses and Structure

4. Boron Group: Boron Hydrides, preparation, structure and Bonding with reference to LUMO, HOMO, interconversion of lower and higher boranes, Metalloboranes, Carboranes, Reactions of Organoboranes

5. Carbon Group: Allotropes of Carbon, C₆₀ and compounds (fullerenes), Intercalation compounds of Graphite, Carbon nanotubes, synthesis, properties, structure-single walled, multi walled, applications

6. Organometallic compounds of Si, Sn, Pb, Ga, As, Sb, Bi. Structures, synthesis, Reactions

7. Nitrogen Group: Nitrogen activation, Boron nitride, Oxidation states of nitrogen and their interconversion, PN and SN Compounds, NOₓ and their redox chemistry

References:
2) Concise Inorganic Chemistry, J. D. Lee, Fourth Edn., (Chapman and Hall)
4) Inorganic Chemistry: Catherine Housecroft
6) Organometallic Chemistry-A Unified Approach: R. C. Mehrotra & A. Singh
Organic Chemistry

Semester - I

CHO-150: Basic organic chemistry                (4 Credits)

Section-I      (2 credits, 24 L, 6 T)

1. Structure and reactivity:                (10 L)
   a) Chemical bonding and basis of reactivity- Chemical bond, delocalization,  
      conjugation, resonance, hyperconjugation, tautomerism, inductive effects.
   b) Acidity and basicity: various structural effects, hard and soft acid and base concept.
   c) Aromaticity: Benzenoid and non-benzenoid compounds, Huckels rule,  
      antiaromaticity, Application to carbocyclic and heterocyclic systems, annulenes,  
      azulenes, current concepts of aromaticity.
   d) Structure and stability of reactive intermediates, carbenes, nitrenes, carbocations,  
      carbanions and free radicals.

2. Stereochemistry:                          (14 L)
   a) Stereochmical principles, enantiomeric relationship, distereomeric relationship, R and  
      S, E and Z nomenclature in C, N, S, P containing compounds, Prochiral relationship,  
      stereospecific and stereoselective reactions, optical activity in biphenyls, spiranes,  
      allenes.
   b) Conformational analysis of cyclic and acyclic compounds.

Section-II

1. Organic reactions:                        (2 credits, 24 L, 6 T)

   a) Substitution reaction:               (10 L)
      Aliphatic nucleophilic substitution-S_N1, S_N2 mechanism, NGP by pi and sigma  
      bonds, classical and non-classical carbocations, phenonium ions, norbornyl system,  
      carbocation rearrangement in NGP, SNi mechanism, nucleophilic substitution in  
      allylic, trigonal and vinylic carbon.
Effect of structure, nucleophile, leaving group and solvent on rate of $S_N1$ and $S_N2$ reactions, ambident nucleophile and regioselectivity.

b) Aromatic Electrophilic substitution (4 L)
Arenium ion mechanism, orientation and reactivity, energy profile diagram, ortho, para, ipso attack, orientation in other ring systems, six and five membered heterocycles with one hetero atom.
Important reactions like Friedel crafts alkylation and acylation, Nitration, halogenation, formylation, chloromethylation, sulphonation, diazonium coupling.

Aromatic nucleophilic substitution (2 L)
$S_NAr$, $S_N1$, Benzyne and $S_NR1$ reactions, reactivity: effect of substrate structure, leaving group and attacking nucleophile.

c) Addition reactions (4 L)
Addition to C-C multiple bonds - mechanism and stereochemical aspects of addition reaction involving electrophile, nucleophile and free radicals, Regio and chemo selectivity, orientation and reactivity, conjugate addition.

d) Elimination reactions (4 L)
E1, E2, E1cb mechanisms, orientation and stereochemistry in elimination reaction, reactivity effect of structure, attacking and leaving group, competition between elimination and substitution, syn eliminations.

|   | For contact of different chemicals on skin, eyes, and inhalation and ingestion |   |

| 7 | Types of fire extinguishers, method of use. | (1 L) |

|   | Importance and use of current 16 point format, Labels and pictograms and some of their discrepancies, Globally Harmonized System for SDS, label changes (2014) |   |

| 9 | Inventory Management, Storage and Disposal | (10 L) |
Inventory Management, Storage, Waste Classification, Hazardous Waste, Non-Hazardous Waste, mixed waste, Waste Disposal

10. What to do when things go wrong
   Spills, mercury spills, Injuries, Fires, building Evacuations, Emergencies

11. OSHA laboratory Standards
   Case studies: Reason for fire or accident, affixing responsibility and proposing action for prevention or minimizing possibility or severity
   Losses in an accident, Financial and non-financial, Importance of system based solutions over manual action, Economical solutions, Compromise between accident costs and prevention costs.

12. Good Laboratory Practices (GLP)
   Introduction and principles of GLP, performance of Lab studies and calibration using Standard Operating Procedures (SOPs), Instrument validation, reagent certification, Lab notebook maintenance to contemporary standards, maintenance of lab records based on instrument and reagent certification. Introduction to ISO and NABL accreditation.

Books:
6. What went wrong By Trevor Kletz, Gulf professional Publisher
Physical Chemistry
Semester – II

CHP-210: Fundamentals of Physical Chemistry II (4 Credits)

SECTION-I (2 Credits, 24 L, 6 T)

1. Molecular Spectroscopy

i) Recapitulation- Electromagnetic region, units and dimensions, Width of spectral lines, collision, Doppler and natural broadening, intensity of spectral lines (4 L)

ii) Rotation spectra- Classification of molecules based on moment of inertia, rigid rotor, most intense line, isotopic effect on the rotational spectra, non-rigid rotator, diatomic molecules, linear triatomic molecules, symmetric top molecules. (5 L)

iii) Infra red spectroscopy- Diatomic molecule, selection rule, anharmonicity, Morse potential, justifying the form of Morse potential, combinations of overtones, and hot bands in polyatomic molecules. (7 L)

iv) Vibrational rotational Spectra, fine structure in diatomic molecules, break down of the Born-Oppenheimer approximation, effect due to nuclear spin, parallel and perpendicular vibrations (4 L)

v) Raman Spectroscopy- Classification and Quantum theory, polarizability ellipsoid, Rotational and Vibrational Raman Spectra, structure elucidation from combined Raman and IR data (4 L)

References

SECTION-II (2 Credits, 24 L, 6 T)
1. Nuclear and radiation Chemistry

i) Types and detection of ionizing radiations- α, β, γ decay and their energetic, GM and Scintillation counters. (6 L)

ii) Applications of radioisotopes- Typical reactions involved in preparation of radioisotopes: \( ^3\text{H} \), \( ^{14}\text{C} \), \( ^{22}\text{Na} \), \( ^{32}\text{P} \), \( ^{35}\text{S} \) and \( ^{137}\text{I} \). Physicochemical applications-Diffusion coefficients, Surface area, Solubility, Analytical applications, NAA, agricultural and IDA. (6 L)

2. Chemical Bonding (12 L)

Valence Bond theory, hybrid orbitals, geometry and hybridization, Molecular Orbital Theory of di- and tri-atomic molecules, linear variation method, Approximations underlying Huckel theory, charge density, pi-(mobile) bond order, Aromaticity, Applications of Huckel theory.

Section-II: Bioinorganic Chemistry  
(2 Credits, 24 Lectures, 6 T)

1. Overviews of Bioinorganic Chemistry  
   (1 L)
2. Principles of Coordination Chemistry related to Bioinorganic Research and Protein, Nucleic acids and other metal binding biomolecules.  
   (7 L)
   (8 L)
4. Biochemistry of following elements:
   (a) Iron: Ferritin, Transferrin, Fe-S clusters, Porphyrin based systems  
       (6 L)
   (b) Manganese: Photosynthesis  
       (2 L)

Reference Books:
2. Bioinorganic Chemistry: Inorganic Elements in Chemistry of Life: W.Kaim and B. Schwederski  
3. Bioinorganic Chemistry: Bertini, Gray, Lippard and Valentine  
4. Bioinorganic Chemistry: R.J.P. Willams  
5. Bioinorganic Chemistry: Robert Hay  
6. Bioinorganic Chemistry: M.N. Hughes
Organic Chemistry
Semester – II

CHO-250: Synthetic organic chemistry and spectroscopy (4 Credits)

SECTION – I: Synthetic Organic Chemistry (2 Credits, 24 L, 6 T)

1. Oxidation reactions: (6 L)
   CrO$_3$, PDC, PCC, KMnO$_4$, MnO$_2$, Swern, SeO$_2$, Pb(OAc)$_4$, Pd-C, OsO$_4$, m-CPBA, O$_3$, NaIO$_4$, HIO$_4$

2. Reduction reactions: (4 L)
   Boranes and hydroboration reactions,
   MPV reduction and reduction with H$_2$/Pd-C, Willkinsons catalyst, DIBAL and Wolff Kishner reduction.

3. Rearrangements: (6 L)
   Beckmann, Hofmann,, Curtius, Smith, Wolff, Lossen, Bayer-villiger,
   Sommelet, Favorskii, Pinacol-pinacolone, Benzil-benzilic acid, Fries.

4. Ylides: (4 L)
   Phosphorus, Nitrogen and Sulphur ylides

5. Addition to carbonyl group: (4 L)
   Grignard, organo zinc, organo copper, organo lithium, reagents to carbonyl and unsaturated carbonyl compounds.

SECTION-II: Spectroscopy (2 Credits 24 Lectures, 6T)

a) UV: Factors affecting UV absorption and interpretation of UV spectra (2 L)
b) IR: Basic ideas about IR frequencies, interpretation of IR spectra (4 L)
c) PMR: Fundamentals of PMR, factors affecting chemical shift, integration coupling (1\textsuperscript{st} order analysis) (8 L)
d) Introduction to CMR and mass spectrometry (4 L)
e) Problems on UV, IR and PMR (6 L)
References:

2. Modern Synthetic reactions – H.O. House
3. Organic Synthesis – M.B. Smith
5. Stereochemistry conformations and mechanism by P.S. Kalsi
6. Organic chemistry –by Cram, Hammond, Pine and Handrickson
General Chemistry
Semester – II
CHA-290: General Chemistry – II
(Any two parts except B) (4 Credits)

PART-A: Modern Separation Methods and Hyphenated Techniques (2 Credits, 24 L, 6 T)

1. Mass Spectrometry
   Principle, Instrumentation, Ionization methods- Electron bombardment ionization, Arc and spark ionization, Photo-ionization, Thermal ionization, Chemical ionization, Mass analyzers-Magnetic, Double focusing, Time of flight, Quadrupolar, Ion cyclotron resonance analyzer, Correlation of mass spectra with molecular structure and molecular weight, Isotopic Abundances, Fragmentation patterns, Quantitative analysis, Applications and Problems. Fourier transform mass spectrometry, Tandem mass spectrometry, inductively coupled Plasma-mass spectrometry,

   Ref. 1, Pages 647-696; Ref. 2, Pages 465-506

2. Gas Chromatography
   Theory and Instrumentation of GC, Sample injection- Split and splitless injection, Column types, Solid/Liquid Stationary phases, Column switching techniques, Basic and specialized detectors, elemental detection, chiral separations, , Gas chromatographs and chemical analysis, Interfacing of gas chromatography with mass spectrometry, Applications of GLC, Use of GC-MS , High Speed gas chromatography, Gas- solid chromatography and problems,

   Ref. 2, Pages 540-569; Ref. 3, Pages 125-143; Ref. 4, Pages 947-970.

3. High Performance Liquid Chromatography (HPLC)
   Theory and instrumentation of HPLC, Optimization of column performance, Gradient elution and related procedures, Derivatization, Mobile phase delivery system, sample injection, separation column, detectors, Interfacing HPLC with mass spectrometry, Structure types of column packing, adsorption chromatography, Bonded phase chromatography, reverse phase chromatography, ion–pair chromatography, ion exchange chromatography, size exclusion chromatography, GC-MS and LC-MS, Applications and Problems.

   Ref. 2: Pages 580-650, Ref. 4: Pages 974-992.
References:

PART-B: (Compulsory for Drug Chemistry Students and Students from other disciplines also can opt for it)

Basic Biochemistry (4 Credits, 48 L, 12 T)

1. Introduction to Biochemistry: Scope of the subject in pharmaceutical sciences, Biochemical reactions, Highlights of prokaryotic and Eukaryotic cell metabolism.
4. Biomolecules:
   Proteins: Introduction, functional, classification of amino acids, classification, physicochemical properties, Optical activity, Reaction with ninhydrin, Formaldehyde, Aminoacids, Essential and non essential amino acids, efficacy, structure, peptide bond, end group analysis, Helix, B-sheet structure, tertiary, quaternary structure, globular protein, fibrous protein, amino acid therapy, Protein engineering
   Carbohydrates: complex carbohydrate, structure of Chitin, Starch, Glycogen + Metabolism
   Lipids: definition, classification, functions, types of fatty acids, and its biological role and metabolism.
5. Enzymes:  Introduction, classification according to the reaction catalysis and source) structure of enzyme, co factures, active sites, Binding sites, Km, Vmax, Enzyme kinetics, Double reciprocal
plot, effect of substrate, pH ionic strength, Concentration, Temperature on the rate of enzyme reactions, Enzyme inhibition (competitive, uncompetitive, non competitive and irreversible), Enzyme biotechnology. Manufacturing of medicinal compounds by enzymatic reactions, Penicillin acylase for the production 6-APA, Therapeutical uses of enzymes.

5. Molecular Biology, J.D. Watson (The Benjamin/ Cumming Company, Inc.)

PART- C: Concept of Analytical Chemistry (2 Credits, 24 L, 6 T)

1. Data Handing and Spreadsheets in Analytical Chemistry (6 L)

Accuracy and Precision, classification of errors, Significant figures, rounding off, ways of expressing accuracy, Mean Deviation, Average Deviation, RMD. Standard Deviation Propagation of errors, Confidence limits, Tests of Significance, Rejection of results and Problems.

Ref. 2: Pages 65-99.

2. Sampling, Standardization and Calibration (8 L)

Analytical Samples and Methods of Sampling, Sample Handling, Gross sample, Preparation of Laboratory samples, Automated Sample Handling, Comparisons with standard and Numerical Problems.

Ref. 1: Pages 175-200.

3. Introduction to analytical separations (8 L)

Separation by precipitation, separation of species by distillation, separation by extraction, separation by ion exchange chromatography and problems.

Ref. 1: Pages 906-946

References:
PART- D: Industrial Methods of Analysis (2 Credits, 24 L, 6 T)

1. Chemometrics: (10 L)

Concentration of solution based on volume and mass unit, calculations of ppm, ppb, and dilution of the solutions, Concept of mmole, Stoichiometry of chemical reactions, Concept of gmole, Limiting reactants, theoretical and practical yield, solubility and solubility equilibria. Concept of formation constant, Stability and instability constants, stepwise formation constants and Numerical problems.

2. Quality in Analytical Chemistry (6 L)

Quality systems in chemical laboratories, cost and benefits of quality system, types of quality standards for laboratories, total quality management, quality audits, and qualities reviews, responsibility of laboratory staff for quality and problems.

3. Process Instruments and Automated Analysis (8 L)

Introduction, industrial process analyzer, methods based on bulk properties, continuous online process control, automatic chemical analyzers, automatic elemental analyzers, Numerical problems.

Ref 3: Pages: 786-828.

References:

PART- E: Organometallic and Inorganic Reaction Mechanism (2 Credits, 24 L, 6 T)

(Recommended for M. Sc. other than Inorganic specialization)

1) Organometallic Chemistry (8 L)
Organic ligands and nomenclature, 18 electron rule: counting electrons, ligands having extended pi system, bonding between Metal Atoms and organic pi systems: linear pi system, cyclic pi system, spectral analysis and characterization of organometallic complexes: IR and NMR, examples.

2) **Organometallic Reactions and Catalysis** (8 L)

3) **Coordination Compounds: Reactions and Mechanism** (8L)
   History and principles, Substitution reactions: Inert and labile complexes, mechanism of substitution, Kinetics Consequences of reaction pathway: dissociation, interchange, association, Experimental evidences in Octahedral Substitution: dissociation, linear free energy relationship, associative mechanism, the conjugate base mechanism, the kinetic chelate effect, Stereochemistry of reactions: substitution in trans complexes, substitution in cis complexes, isomerisation of chelate rings, substitution reactions in Sq. Pl. Complexes.

**Reference Book:**
1) Inorganic Chemistry: Gary Miessler and Donald A. Tarr, Third Ed., Pearson (Chapter-12, 13 and 14 pages: 422 to 561)

**Part F: Mathematics for Chemists** (2 Credit; 24 L, 6 T)
(Recommended for M. Sc. other than Physical Chemistry specialization)

1. Functions: Differential and integral calculus, limits, derivatives, physical significance, basic rules of differentiation, maxima and minima, application is chemistry, exact and inexact differentiation, Taylor & McLaurin Theorem, curve sketching, partial differentiation, rules of integration, separation of variable, substitution, partial function method to solve to indefinite integrals in chemistry. (14 L)

2. Differential Equations: Separation of variables, homogeneous, exact, linear equations of second order, series solution method. (6 L)
3. Vectors Matrices, and Determinants:  
Vectors, dot, Cross and triple products, introduction to matrix algebra, addition and multiplication of matrices, inverse, adjoins and transport of matrices, unit and diagonal matrices.

References:
3) Mathematical Preparation for Physical Chemistry, F. Daniels, McGraw Hill (1972)

Part G: Pericyclic reactions, Photochemistry and Free radicals  
(Recommended for M. Sc. other than Organic Chemistry specialization)

1. Pericyclic reactions  
Electrocyclisation, cycloaddition, sigmatropic and Alder-ene reactions. Analysis of pericyclic reactions by construction of correlation diagrams and by FMO approach.

2. Free radicals  
Generation, stability and general reactions like displacement, addition and rearrangements.

3. Photochemistry  
Basic concepts in Photochemistry, Jablonski diagram, quenching, triplet excitation, photosensitization, quantum yield, photochemistry of carbonyl compounds (photoreduction, photoenolization, Norrish type I and II) and benzene derivatives.

3. Organic Chemistry – Warren, Clayden, Greeves and Wothers
5. Organic reactions and Orbital Symmetry - T. L. Gilchrist and R. C. Storr
6. Excited states in Organic Chemistry – J. D. Coyle and J. A. Barltrop
M.Sc.-I: Practical

CHP-107: Physical Chemistry Practicals (6 Credits)

A) Conductometry: (Any four)
1. Study the Hydrolysis of NH₄Cl or CH₃COONa or aniline hydrochloride.
2. Determination of equivalent conductance at infinite dilution and dissociation constant of acetic acid.
3. Study the second order velocity constant of the hydrolysis of ethyl acetate by sodium hydroxide.
4. Determination of ΔG, ΔH, and ΔS of silver benzoate by conductometry.
5. Determination of critical micellar concentration (CMC) and ΔG of micellization of sodium dodecyl sulphate (SDS).
6. Determination of concentrations of strong acid and weak acid present in the mixture by titration with strong base.

B) Potentiometry: (Any four)
1. Determination of stability Constant of a complex ion.
2. Determination of Solubility and solubility product of a sparingly soluble salt.
3. Estimation of amount of halides present in the mixture.
4. Determination of concentrations of strong acid and weak acid present in the mixture by titrating with strong base.
5. Determination of concentrations of reductant or oxidant by redox titration.

C) pH metry: (Any two)
1. Determination of the acid and base dissociation constant of an amino acid and hence the isoelectric point of the acid.
2. Determination of dissociation constants of tribasic acid (phosphoric acid)
3. Determination of Hammett constant of o-, m-, p- amino/nitro benzoic acid.

D) Polarography:
1. Determination of half wave potential (E½) and unknown concentration of an ion.
2. Amperometric titration of Pb(NO₃)₂ with K₂Cr₂O₇.

E) Colorimetry/Spectrophotometry: (Any two)
1. Simultaneous determination of cations from the mixture.
2. Determination of amount of copper by photometric titration with EDTA.
3. Study the kinetics of iodination of acetone spectrophotometrically.

F) Radioactivity: (Any two)
1. Estimation of Manganese in tea leaves by Neutron Activation Analysis.
2. Determination of half-life of a radioactive nuclide and counting errors.
3. Determination of $E_{\text{max}}$ of $\beta$ radiation and absorption coefficients in Al.

G) Chemical Kinetics: (Any three)
1. Study of Kinetic decomposition of diacetone alcohol by dilatometry.
2. Determination of individual orders of iodide and persulphate ions and overall order of oxidation reaction of iodide ion by persulphate ion.
3. Investigation of influence of ionic strength on rate constant (Brönsted primary salt effect).
4. Determination of temperature coefficient and energy of activation of acid catalyzed ester hydrolysis reaction.

H) Non-Instrumental: (Any five)
1) Determination of surface excess of amyl alcohol or TX-100 surfactant by Capillary rise method.
2) Statistical treatment of experimental data.
3) Determination of molecular weight by steam distillation.
4) Determination of glycerol radius by viscosity.
5) Determination of partial Molar Volume (Polynometry) and the densities of a series of solutions and to calculate the molar volumes of the components.
6) Analysis of crystal structure from single crystal X-ray pattern.

References:
1. Practical physical chemistry, A. Findlay, T.A. Kitchner (Longmans, Green and Co.)
3. Senior Practical Physical Chemistry, B.D. Khosla and V.S. Garg (R. Chand and Co., Delhi.).
5. Physical chemistry by Wien (2001)
CHI-107: Inorganic Chemistry Practical (6 Credits)

Part-I: Ore analysis (Any Two) (Ref. -1)

a. Analysis of Pyrolusite ore.
   Determination of (i) Silica and (ii) Manganese
b. Analysis of Chalcopyrite ore.
   Determination of (i) Copper and (ii) Iron
c. Analysis of hematite ore.
   Determination of (i) Silica and (ii) Iron

Part-II: Alloy Analysis (Any Two) (Ref. -1)

a. Determination of tin and lead from solder.
b. Determination of iron and chromium from mild steel.
c. Determination of copper and nickel from cupronickel.

Part-III: Inorganic Synthesis and Purity (Any five) (Ref. – 2)

Part A: Five preparations

Part B; Purity determination of above preparations

a. Mn(acac)$_3$
b. Chloro penta-ammime cobalt (III) chloride
c. Nitro penta-amminecobalt (III) chloride
d. Nitrito penta-amine cobalt (III) Chloride.
e. Potassium tri-oxalato aluminate
f. Tris(ethylene di ammine) Ni(II) thiosulphate.
e. Bis[TrisCu(I)thiourea]

Part-IV: Ion – exchange chromatography (Any one experiment) (Ref. -1 and 3)

a) Separation of mixture of Zn(II) and Cd(II) using Amberlite IRA 400 anion exchanger
   and quantitative estimation of separated ions Zn(II) and Cd(II)
b) Separation of mixture of Zn(II) and Mg(II) using Amberlite IRA 400 anion exchanger
   and quantitative estimation of separated ions Zn(II) and Mg(II)

Part-V: Spectrophotometry (all two experiments)
a. Estimation of phosphate from waste water by calibration curve method (Ref. -4)

b. Determination of equilibrium constant of M – L systems Fe (III) – Salicylic acid or Fe(III)–Sulphosalicylic acid or Fe(III)–β–resorcilic acid by Job’s continuous variation method. (Ref.-3)

c. Determination of iron by solvent extraction techniques in a mixture of Fe(III) +AL(III) or Fe(III) + Ni(III) using 8–hydroxyquinoline reagent. (Ref. -1)

or

c) Determination of Cu(II) by solvent extraction as Dithiocarbamate/8-Hydroxyquinoline complex (Ref-1,3)

Part-VI: Inorganic characterization techniques (any one of the following)

a. Solution state preparation of [Ni(en)]_3S_2O_3, [Ni(H_2O)_6]Cl_2, [Ni(NH_3)_6]Cl_2. Record absorption spectra in solution of all three complexes and analyse it. Arrange three ligands according to their increasing strength depending on your observations. (Ref. -5)

b. Determination of magnetic susceptibility (χ_6 and χ_m) of mercury tetracyanato cobalt or Fe(acac)_3 or Ferrous ammonium sulfate by Faraday or Gouy method. (Ref. -3)

Part-VII: Synthesis of Nanomaterials (any one of the following)

a) Synthesis of nano size ZnO, its characterization by UV-Visible spectroscopy and removal of dye by ZnO-photocatalysis (Ref-2)

b) Synthesis of nano size α-Fe_2O_3 and study of adsorption of phosphate on it (Ref-2)

Part-VIII: Conductometry (any one of the following).

a) Verification of Debye Huckle theory of ionic conductance for strong electrolytes KCl,BaCl_2 K_2SO_4, K_3[Fe(CN)_6] (Ref. -3)

b) Structural determination of metal complexes by conductometric measurement. (Ref-3)

c) To study complex formation between Fe(III) with sulfosalicylic acid by conductometry (Ref-3).

Part-IX: (any one of the following)

a) Synthesis and photochemistry of K_3[Fe(C_2O_4)_3] 3H_2O. (Ref-4)

b) Kinetics of substitution reaction of [Fe(Phen)_3]^{2+} (Ref-3)
Part-X: Table work

a) Data analysis, error analysis, least squares method. 

Reference Books:

5) Ligand Field Theory, B. N. Figgis.
CHO-247: Organic Chemistry Practical (6 Credits)

Use of chemistry software like MOPAC, ISIS draw, Chem office (Minimum 3 experiments)

Purification techniques (any 5)

Purification of solvents and reagents using techniques like crystallization, distillation, steam distillation, vacuum distillation, drying and storage of solvents, sublimation etc.

a) Chromatography: TLC, Column.

b) Solvent extraction using soxhlet extractor

1. Three component mixture separation and analysis using ether.
   (8 mixtures minimum including amino acid)

2. Single stage preparations (minimum 8 preparations)

   a) 2-Methoxy naphthalene to 1-formyl-2-methoxy naphthalene
   b) Toluene to 4-methyl acetophenone
   c) Anthranilic acid to 2-iodo/2-chloro benzoic acid
   d) Cyclohexanol to cyclohexanone
   e) Benzophenone to diphenyl methane
   f) Benzyl cyanide to phenyl acetic acid
   g) Benzaldehyde to chalcone
   h) Gycine to Benzoylglycine
   i) Nitrobenzene to m-di-nitrobenzene
   j) m-di-nitrobenzene to m-nitroaniline
   k) Benzoic acid to ethylbenzoate
   l) Diel’s Alder reaction of anthracene and maleic anhydride
   m) Chlorobenzene to 2,4-dintro chlorobenzene

Reference books

n) 1. Textbook of practical organic chemistry – A.I. Vogel
M.Sc. Drug Chemistry

Practical

CHD-128: INORGANIC AND ANALYTICAL CHEMISTRY PRACTICALS

(6 Credits)

1. Inorganic synthesis and characterization by physical or chemical methods:
   a) Cis-trans potassium diaquo dioxalate chromate (III)
   b) Chloropentammino cobalt (III) chloride.

2. Colorimetry;
   Keg of M-L systems such as:
   i) Fe (III) Salicylic acid
   ii) Fe (III) Sulphosalicylic acid
   iii) Fe (III) resorcinic acid by Job’s method and Mole ratio method

3. Photometric titration of systems such as:
   a) Cu^{2+} - EDTA
   b) Fe^{2+} - Sulphosalicylic acid
   c) Co^{2+} - R-nitroso salt.

4. Potentiometry:
   a) Complexometric determination using disodium EDTA of
      i) Co^{2+}
      jj) Al^{3+}
      iii) Cu^{2+}

5. Solvent extraction of Al / Mo using 8-hydroxy quinoline complex and determination by spectrophotometry

6. Solvent extraction of ferric thiocyanate complex and determination by colorimetry.

7. Separation and estimation of Fe and Al on a cation exchanger.

8. Separation and estimation of copper and cobalt on cellulose column.

9. Analysis of Vitamin C in juices and squashes.

10. Analysis of Vitamin A in food products.

11. Simultaneous determination by titanium and vanadium Pt and Pd using hydrogen peroxide by spectrophotometry.
12. Estimation of Na, K and Ca in binary mixture by flame photometry using Li as Internal standard and using standard addition method.
13. Determination of the strength of the following by fiourimetmy, beryllium, aluminium, vitamin B1, vitamin B2.
14. Determination of the strength of commercial phosphoric acid/vinegar by conductometric titration.
15. Analysis of malathion by colorimetry or polarography.
17. Estimation of Hg, Pb, Cd spectrophotometrically/complexometrically.
18. Estimation of sulphadizine.
19. Estimation of mixtures of benzoic acid and salicylic acid in pharmaceutical preparations
20. Determination of iron, calcium and phosphorous in milk powder.

References:
1) A textbook of Qualitative Inorganic Analysis3rd Edn., A. I Vogel, ELBS.
4) Pharmacopoeia of India.

CHD-108: Practical Course in Separation, Purification & Analytical techniques in Drug Chemistry (5 Credits)
1. Purification of solvents and reagents
2. Mixture separation Two and Three components.
3. Isolation of Natural products from Clove, Cinnamom by steam distillation. Also use Soxhlet apparatus for one natural product.
4. Chromatographic techniques as TLC, Column chromatography
5. Biomolecule separation and identification using Gel Electrophoresis, Paper chromatography Immunoelectrophoresis.
7. Try to use spectral data whenever possible.
8. Any current techniques as per need and demand.

**CHD-248: ORGANIC CHEMISTRY PRACTICALS**  
*(5 Credits)*

1. Techniques: Crystallization, fractional crystallisation, fractional distillation, vacuum distillation, sublimation, steam distillation.
2. Single stage preparation involving different type of reactions (minimum 8 preparations).
3. Two-stage preparations (minimum 2 preparation).
4. Three-stage preparations (minimum 2 preparations).
5. Derivatives of functional groups such as acetyl, benzoyl, 2, 4-DNP, oxime, anilide, amide and aryloxy acetic acid (minimum one of each type)

Typical preparations from which the single and two stage preparations can be chosen are:

1. Toluene — p-nitrotoluene — p-nitrobenzoic acid — p-amino benzoic acid
2. Benzene — Acetopheneone — Acetophenone oxime — Acetanilide
3. Benzaldehyde — Benzoin — Benzil — Benzillic acid
4. Nitrobenzene — m-dinitrobenzene — m-nitroaniline — m-nitrophenol
5. Phthalic acid — phthalic anhydride — phthalimide — Anthranilic acid
6. Anthranilic acid — phenylglycine — orthocarboxylic acid — indigo
7. Acetophenone — Benzalacetophenone — epoxide
8. Cyclohexanone — Cyclohexanone oxime — caprolactam
9. Phthalic anhydride — o-benzoylbzoic acid — anthraquinone.
10. O-Cholobenzoic acid — N-phenylanthenylanilic acid — acridone.
11. Cholrobenzene — 2,4-dinitrochlorobenzene — 2,4-dinitrophenol
12. Bromobenzene — triphenylcarbinol — tritylchloride
13. Resorcinol — resacetophenone — 4-ethyl resorcinol
14. Phenol — allylphenyl ether — o-allylphenol
15. Phenol — salicylaldehyde — coumarin
