

**SAVITRIBAI PHULE PUNE UNIVERSITY
(Formerly University of Pune)**

Revised Syllabus for M. Tech. (Energy Technology) effective from AY 2019-20

UNDER THE FACULTY OF SCIENCE AND TECHNOLOGY

**School of Energy Studies
Savitribai Phule Pune University
Pune 411 007**

September 2019

**Savitribai Phule Pune University,
School of Energy Studies
Pune 411 007**

Revised Syllabus M. Tech (Energy Technology) for academic year 2019-20 onwards

The course consists of four semesters, each semester having courses of 20 credits. The semester wise courses are given below.

Semester-I		Credits
EN-111	Energy Scenario and Energy Policy	3.0
EN-112	Fundamentals of Electrical Energy Systems	3.0
EN-113	Fundamental of Mechanical Energy Systems	3.0
EN-114	Fundamentals of Thermal Energy Systems	3.0
EN-121	Energy Laboratory - I	4.0
	Elective Courses	
EN-131	Environmental Impact of Energy Systems	4.0
Semester-II		
EN-211	Plant Instrumentation & Control	4.0
EN-212	Renewable Energy Technologies I	4.0
EN-213	Energy Audit and Management I	4.0
EN-221	Energy Laboratory-II	4.0
	Elective Courses (Any One)	
EN-231	Data Analytics	4.0
EN-232	Advanced Solar Thermal & Photovoltaics	4.0
Semester-III		
EN-311	Energy Audit and Management II	4.0
EN-312	Assessment of Thermal Energy Systems	4.0
EN-313	Steam Utilization	4.0
EN-321	Industrial/ Laboratory training (Mini Project)	4.0
	Elective Courses (Any One)	
EN-331	Wind Energy Systems	4.0
EN-332	Waste to Energy	4.0
EN-333	Energy Storage	4.0
Semester-IV		
EN-421	Industrial project/Research project (Major Project)	16.0
	Elective Courses	
EN-431	Research Paper	4.0

Abbreviations	
C	Credits
L	Lectures
S	Seminars
D	Discussions
T	Tutorials

Semester-I

Distribution of Credits and Modules

Course Code	Course Title and Modules	Credits
EN-111	Energy Scenario and Energy Policy	3
	Module No.1: Global Energy Scenario	1
	Module No.2: Indian Energy Scenario	1
	Module No.3: Energy Policy	0.5
	Module No.4: Laws relating to Energy and Environment	0.5
EN-112	Fundamentals of Electrical Energy Systems	3
	Module No.1: Basics of Electrical Energy Systems	1
	Module No.2: Motors, Transformers and Switch Gears	2
EN-113	Fundamentals of Mechanical Energy Systems	3
	Module No.1: Basics of Mechanical Energy Systems and Utility Systems	1
	Module No.2: Refrigeration Systems and Air Conditioning System	2
EN-114	Fundamentals Thermal Energy Systems	3
	Module No.1: Basics of Thermodynamics	0.5
	Module No.2: Combustion and Heat transfer	1
	Module No.3: Heat generating equipments	1
	Module No.4: Industrial Furnaces	0.5
EN-121	Energy Laboratory- I	4
Elective Courses		
EN-131	Environmental Impact of Energy Systems	4
	Module No.1: Impact of Energy systems on Environment	1
	Module No.2: Pollution due to Thermal, Hydel and Nuclear Power Plants	1
	Module No.3: Pollution due to Vehicles and Utilities	1
	Module No.4: Environmental and Pollution Control Laws	1

SYLLABUS FOR SEMESTER-I

EN 111: ENERGY SCENARIO AND ENERGY POLICY (3 Credits)

Module-01: Global Energy Scenario (C-1, L- 05, 5 -S/ D/ T)

Role of energy in economic development and social transformation: Energy, GDP, GNP and its dynamics. Energy Resources: Coal, Oil, Natural Gas, Nuclear Power and Hydroelectricity, Solar and Other renewable etc. Depletion of energy sources and impact exponential rise in energy consumption on economies of countries and on international relations.

Energy Security: Chemical and Nuclear: Non Proliferation, Energy Security, Energy Consumption and its impact on environmental climatic change.

Future Energy Options, Sustainable Development, Energy Crisis, Transition from Carbon Rich and Nuclear to Carbon Free Technologies, Parameters of Transition. Energy Intensity, IEA statistics and projections.

Module02: Indian Energy Scenario (C-1, L- 05, 5 -S/ D/ T)

Energy Resources and Consumption: Commercial and Noncommercial Forms of Energy, Fossil Fuels, Renewable Sources, Pattern in the Past, Present and Future Projections of Consumption Pattern, Sector wise energy consumption, Impact of Energy on Economy, Development and Environment, Energy for Sustainable Development, Need for use of New and Renewable Energy Sources.

Module03: Energy Policy (C-0.5, L- 05, 5 -S/ D/ T)

Energy and Environmental Policies, International Energy Policies, International Energy Treaties (Rio, Montreal, Kyoto)

Energy Policy Issues: Fossil Fuels, Renewable Energy, Power Sector Reforms, Restructuring of Energy Supply Sector, Energy Strategy for Future.

Open Access, Electricity Wheeling and Banking, Renewable Purchase Obligations (RPO), Renewable Energy Certificates (RECs), Perform Achieve and Trade (PAT scheme), Energy Certificates (E-Certs), Power exchanges and electricity trading.

National Energy Policy, Tariff policy, Hydro power policy, Renewable Energy: Present Status and future plans, Targets, Promotional activities.

Impact of Global Variations, Energy Productivity (National and Sector wise productivity).

Module 04: Laws relating to Energy and Environment (C-0.5, L- 05, 5 -S/ D/ T)

Energy Conservation Act-2001 and its features, Electricity Act-2003 and its features, Framework of Central Electricity Authority (CEA), Central and States Electricity Regulatory Commissions (CERC and ERCs), Electricity Tariff Setting, Emission Trading.

REFERENCE BOOKS:

- [1] Energy for a sustainable world: Jose Goldenberg, Thomas Johansson, A.K.N.Reddy, Robert Williams (Wiley Eastern).
- [2] Energy policy: B.V. Desai (Weiley Eastern).
- [3] Modeling approach to long term demand and energy implication: J. K. Parikh.
- [4] Energy Policy and Planning:B.Bukhootsow.
- [5] TEDDY Year Book Published by Tata Energy Research Institute (TERI).
- [6] World Energy Resources : Charles E. Brown, Springer 2002.
- [7] International Energy Outlook-EIA annual Publication.
- [8] Heat and Thermodynamics – M.W. Zemansky (McGraw Hill Publication).
- [9] Principles of Energy Conversion: A.W. Culp (McGraw Hill International edition).
- [10] BEE Reference book: no.1/2/3/4.

EN 112: FUNDAMENTALS OF ELECTRICAL ENERGY SYSTEMS (3 Credits)

Module 01: Basics of Electrical Energy System(C-1, L- 10, 5 -S/ D/ T)

Essence of electricity, Conductors, semiconductors and insulators (elementary treatment only); Electric field; electric current, potential and potential difference, electromotive force, electric power, ohm's law, basic circuit components, electromagnetism related laws, Magnetic field due to electric current flow, force on a current carrying conductor placed in a magnetic field, Faradays laws of electromagnetic induction. Types of induced EMF's, Kirchhoff's laws

Magnetic field due to electric current flow, force on a current carrying conductor placed in a magnetic field, Faradays laws of electromagnetic induction. Types of induced EMF's, Kirchhoff's laws, Network Analysis : Basic definitions, types of elements , types of sources, resistive networks, inductive networks, capacitive networks, series parallel circuits, star delta and delta star transformation , Alternating Quantities : Principle of ac voltages , waveforms and basic definitions, relationship between frequency, speed and number of poles, root mean square and average values of alternating currents and voltage, form factor and peak factor, phasor representation of alternating quantities.

Module 02: Motors, Transformers and Switch Gears (C-1, L- 10, 5 -S/ D/ T)

AC Induction: Three phase induction motor, principle of operation, slip and rotor frequency, torque. AC Synchronous: Principle of operation, EMF equation. HT Motors: Difference between HT and LT motors, Advantages, Construction. DC: Direct current machines: Principle of operation of dc machines, armature windings, e.m.f equation in a dc machine, Torque production in a dc machine, Operation of a dc machine as a generator, operation of a dc machine as a motor Starters and Protection. Types of motor controllers, Motor starters DOL, Reduce voltage starters, ASD, Overload relays, Servo controllers etc Starting and Load Characteristics Motor torque speed characteristics, Opportunities for efficiency improvement.

Power Transformers: Principles of operation, Constructional Details, Losses, Transformer Test, Efficiency and Regulation, New type of transformers like hermetically sealed and amorphous

Distribution Transformers: Definition, types and Classification, Connections, Load, No load losses, efficiency, Protection and Switchgear: Power conducting components, such as switches, circuit breakers, fuses, and lightning arrestors, that conduct or interrupt the flow of electrical power - Control systems such as control panels, current transformers, potential transformers, protective relays, and associated circuitry, that monitor, control, and protect the power conducting components. Opportunities for efficiency improvement

Selection and sizing of AC Synchronous, AC Induction, DC motors, Variable Speed Drives: AC Drives- Applications, Principle, Controller types of inverter , DC Drives: 4-Quadrant Drives, Cabling and Distribution: Cable Sizing , Power Factor Correction, Harmonics: Manifestation, Causes Norms, Control and Correction, Lighting systems, Opportunities for efficiency improvement

EN 113: FUNDAMENTALS OF MECHANICAL ENERGY SYSTEMS (3 Credits)

Module01:Basics of Mechanical Energy Systems and Utility Systems (C-1,L- 10,5 -S/ D/ T)

Modules of mechanical engineering, Mechanical Engineering and Overview: Basic Engineering concepts and design considerations, Governing regulations and codes and standards, Strength of Materials, mechanical properties of materials, mechanics of materials, Torque and Power: Basic theory, Shafts, Flywheels etc., Power Transmission: Concepts of Belts Drives, Gearing, Coupling etc. Bearing and Lubricants as Energy Saving Measures. Electromechanical energy: Electric to mechanical energy conversion, Electric Motors.

Compressors, Fans, Pumps Compressed Air System: Types of air compressors, compressors efficiency, efficient compressors operation, Compressed air system components, capacity assessment, and leakage test, factors affecting the performance. Fans and blowers: Types, performance evaluation, efficient system operation, flow control strategies. Pumps and Pumping Systems: Types, performance evaluation, efficient system operation, flow control strategies, variable speed drives. Cooling Towers: Types and performance evaluation, efficient system operations, flow control strategies, assessment of saving opportModuleies.

Module02: Refrigeration Systems, air conditioning systems (C-1,L- 10,5 -S/ D/ T)

Air Conditioning: Vapor compressor refrigeration cycle, refrigerants, coefficient of performance, capacity, factors affecting refrigeration and air conditioning system performance, Vapor absorption refrigeration systems: Working principle, type and comparison with vapor compressor system. Thermal storage in refrigeration.

REFERENCE BOOKS FOR EN 112 AND EN 113:

- [1] Principles of Energy Conversion: A.W. Culp.
- [2] Direct Energy Conversion : M.A. Kettani
- [3] Energy Conversion systems : Begamudre, Rakoshdas
- [4] Direct Energy Conversion :W.R.Corliss.
- [5] Alternative Liquid fuels : B.V. Desai.
- [6] TEDDY year book published by TERI.
- [7] The Watt Committee on Energy (Reports).
- [8] Energy Management Workbook
- [9] NIFES Report -Computers in Energy Audits.
- [10] Efficient Use of Energy: I. E. C. Dryden (Butterworths)
- [11] Instrument Engineers handbook (Voll,II,III), B.G. LiptakChintan Book Comp /CRC Publication
- [12] Analysis and design of Energy Systems- B. K. Hogde (Prentice hall 1988)
- [13] Energy management and control system-Vol-I, II –M.C.Macedo (John Willy)
- [14] Energy Conservation guide book Patrick/Patrick/Fardo (Prentice hall1993)

- [15] Handbook on Energy efficiency.
- [16] ASHRAEE Energy Use (4 Volumes),
- [17] CIBSI –guide –Users Manual (U.K.)
- [18] Aspects of Energy Conversion : I.M.Blair and B.O.Jones
- [19] Principles of Energy Conversion : A.W.Culp (McGrawHill International
- [20] Energy conversion principles : Begamudre Direct Energy Conversion : W.R.Corliss and Rakoshdas
- [21] Principles of Refrigeration R.J. Dossat (Wiley Estern Limited.)
- [22] Efficient Use of Energy : I.E.C.Dryden (Butterworths)
- [23] Instrument Engineers handbook (Voll,II,III)– B.G. LiptakChintan Book Comp /CRC Publiation
- [24] Analysis and design of Energy Systems - Hogdeb.K. (Prentice hall 1988)

EN114: FUNDAMENTALS OF THERMAL ENERGY SYSTEMS(3 Credits)

Module 01: Basics of Thermodynamics (C-0.5, L- 05, 5 -S/ D/ T)

Basic Modules, Dimensions and Conversions For Energy, Concepts of Energy, Heat and Work, Ideal Gas law, 1st and 2nd law of Thermodynamics (Closed and Open Systems), Thermodynamics Power Cycles, Reversible Heat Engine Cycle, IC Engine Cycles, Carnot Cycle, Rankine Cycle, Otto Cycle, Vapor Refrigeration and Power Cycle etc.

Module 02: Combustion and Heat transfer (C-1,L- 10,5 -S/ D/ T)

Stoichiometry, Heat Transfer, Fuels and Fuel Treatments

Module 03: Heat generating equipments(C-1,L- 10,5 -S/ D/ T)

Boilers: Combustion and Flue Gas Handling, Thermic Fluid Systems, Hot Air/ Water Generators

Module 04: Industrial Furnaces (C-0.5,L- 05,5 -S/ D/ T)

Furnaces, Incinerators, Dryers

REFERENCE BOOKS:

- [1] Direct Energy Conversion: W.R.Corliss
- [2] Aspects of Energy Conversion: I.M.Blair and B.O.Jones
- [3] Principles of Energy Conversion: A.W.Culp (McGrawHill International
- [4] Energy conversion principles: Begamudre , Rakoshdas
- [5] Fuel Economy Handbook, NIFES
- [6] Industrial Furnaces (Vol I & II) and M.H. Mawhinney (John Wiley Publications)
- [7] Refractories-F.H. Norton(John Wiley Publication.)
- [8] Refractories and their Uses-Kenneth Shaw, (Applied Science Publishers Ltd.)
- [9] Refractory Material G.B. Rotherberg (Noyes data Corp. N.I)
- [10] The storage and handling of Petroleum liquid (John R. Hughes, Charles Griffin & Co. Ltd.)
- [11] Fuels and fuel Technology Wilfred Francis, (Pergamon press)
- [12] Domestic and commercial oil Burners Charles H. Burkhardt (McGraw Hill Publication)

- [13] The efficient use of steam – Oliver Lyle, (HMSO London)
- [14] Boilers-Types, Characteristics and functions-Carl D. Shields (Mcgraw Hill book)
- [15] The Efficient use of steam generation-General editor-P.M.Goodall
- [16] Principles of Refrigeration R.J. Dossat (Wiley Eastern Limited.)
- [17] Stoichiometry-Bhatt, Vora (Tata Mc.Graw Hill)
- [18] Practical Heat Recovery-Boyen J.L. (John Wiley, New York, USA1976)

EN 121: Energy Laboratory-I (C-4) (Any 10 Experiments)

1. Determination of efficiency of boiler and analysis of flue gases.
2. Study of heat exchangers.
3. Study of variable speed drives
4. COP of cooling towers.
5. Efficiency of electrical motors.
6. Study of diesel generator set.
7. Measurement of load and power factor for the electrical utilities.
8. Determination of efficiency of pumping system.
9. Performance evaluation of blower
10. Performance evaluation of air compressors
11. Determining efficiency of lighting system/loads
12. Introduction to Energy measuring instrument

EN 131: ENVIRONMENTAL IMPACT OF ENERGY SYSTEMS(ELECTIVE COURSE) (4 Credits)

Module01: Impact of Energy Systems on Environment (C-1,L- 10,5 -S/ D/ T)

Environmental degradation due to energy production and utilization, Primary and Secondary pollution due to Green House Gases Emission such as SO_x, NO_x, SPM in air, thermal and water pollution, depletion of ozone layer, global warming, Positive and Negative Impacts, biological damage due to environmental degradation, Sociological and Economical problems due to thermal and other energy projects, Physiological, ecological, environmental and health problems due to energy plants, Industrial and urban waste, Pollution control: Causes, Process and exhaust gases and its control, mechanism and devices for pollution control. Methods of Environmental Impact Assessment (EIA), Principles, origin and development of EIA, Essential components of EIA, Project Screening, Baseline study, Impact Identification, Impact prediction, evaluation and mitigation, methodology matrix method, network, overlay, problems of EIA in developing countries, Future of EIA.

Module02: Pollution due to Thermal,Hydel and Nuclear Power Plants(C-1,L- 10,5 -S/ D/ T)

Potential sources of pollution in thermal power plant, air, water, land pollution due to emission for thermal power plant. Environmental pollution limits guidelines for thermal power plant pollution control. Various

pollution control equipments such as dust collector, bag filter, electrostatic separator, working principle and selection criteria, designing the pollution control system, methods and limitation. Water pollution in thermal power plant, physical and chemical methods of pollution control, Land pollution, effect of land pollution, measurement of land pollution. Limitations and advantages of pollution control systems. Hydrothermal plant environmental assessment, hydrothermal plant and rehabilitation measures for hydrothermal plant. Nuclear power plants and environmental pollution, pollution control measures.

Module03: Pollution due to Vehicles and Utilities (C-1,L- 10,5 -S/ D/ T)

Pollution due to vehicles and utilities, methods to control emission from vehicle, boilers, furnaces etc, International Standards for quality of air and norms for exhaust gases. Effect of hydro electric power stations on ecology and environment.

Module04: Environmental and Pollution Control Laws (C-1, L- 10, 5 -S/ D/ T)

Moduleed Nations Framework Convention on Climate Change (UNFCCC), Protocol, Conference of Parties (COP) 19 Clean Development Mechanism (CDM), Prototype Carbon Funds(PCF) Carbon Credits and it's trading, Benefits to developing countries, Building a CDM project.

Semester-II

Distribution of Credits and Modules

Course Code	Course Title and Modules	Credits
EN-211	Plant Instrumentation and Control	4
	Module No.1: Basic Instrumentation System	1
	Module No.2: Basic Signal Conditioning Elements, Deflection Measurement	1
	Module No.3: Industrial Measurements	1
	Module No 4: Control Systems ,Data Storage and Transmission	1
EN-212	Renewable Energy Technologies I	4
	Module No.1: Solar Thermal and Solar Photovoltaic Energy	1
	Module No.2: Wind Energy	1
	Module No.3: Geothermal, Tidal and Wave Energy	1
	Module No.4: Industrial and Urban Waste and Waste Energy Recovery	1
EN-213	Energy Audit and Energy Management I	4
	Module No.1: Instruments used for Energy Audit Measurements	1
	Module No.2: Measurement Methods for each in Audit Instrument section	1
	Module No.3: Auditing of Energy Generating and Energy using systems and Equipment	1
	Module No.4: Testing and Calculation	1
EN-225	Energy Laboratory-II	4
Elective Courses		
EN-231	Data Analytics	4
	Module-01: Basic data & variables	1
	Module 02: Analysis of data	1
	Module 03: Analysis tools and programming	1
EN-232	Advanced Solar Thermal & Photovoltaics	
	Module No.1: Solar Radiation	1
	Module No.2: Photo Thermal Systems	1
	Module No.3: Photovoltaic Systems	1
	Module No 4:Design, Modeling and Economic Analysis of Solar Energy Systems	1

SYLLABUS FOR SEMESTER-II

EN 211: PLANT INSTRUMENTATION AND CONTROL (ELECTICE COURSE)(4 Credits)

Module 01: Basic Instrumentation system (C-1, L- 10, 5 -S/ D/ T)

Basic Instrumentation system, Elements of a Measurement System, Errors and Uncertainties, Mechanical Transducers, Temperature- Bimetallic Element and Fluid Expansion Type, Thermometers, Pressure-Manometers, flow measurement of liquids and gases, Bourdon Gauges, Load Cells and Elastic Force Devices, Electrical transducers: Resistive Transducers; Inductive Transducers; Capacitive transducers; Thermoelectric Transducers and Photoelectric Transducers; Piezoelectric Transducers.

Module 02 Basic Signal Conditioning Elements, Deflection measurement (C-1, L- 10, 5 -S/ D/ T)

Basic Signal Conditioning Elements: Balance and Deflection Measurements-Differentiating and Integrating Elements; Filters; Data Transmission Elements- Electrical, Pneumatic, Position and Radio Frequency Transmission types, Basic display elements

Module 03: Industrial Measurements (C-1, L- 10, 5 -S/ D/ T)

Industrial Measurements: Velocity Measurement-Contact type: AC-DC Tachometers Non contact type: Magnetic, Photoelectric & stroboscopic methods for speed measurement, Measurement of Force: Different methods; Strain gauge load cell method, Radiation Measurement: Radiation Fundamentals; Radiation detectors; Optical pyrometer, lighting measurements, electrical measurements, introduction to thermal imager.

Module 04: Control Systems, Data storage and Transmission (C-1, L- 10, 5 -S/ D/ T)

Control Systems: Open and Closed loop systems, Linear Time-invariant systems, On-Off, Proportional, PI, PD, PID and Feed-forward Control, Control systems: Feedback and non-feedback systems, feedback characteristics of control system. Block diagram, flow graph, regenerative feedback.

Artificial Intelligence, Sensors, Transmitters, Data-loggers, SCADA Systems, DCS Systems, Remote and cloud based data management, Data Transmission, Serial Communication, LAN, Wireless: GPRS, Wi-Fi, Zigby, Others, Protocols: MODBUS, LONWorks, BACNet,

- Modern Control Engineering by Katsuhiko Ogata, Prentice Hall

EN 212: RENEWABLE ENERGY TECHNOLOGIES-I (4 Credits)

Module 01: Solar Thermal and Solar Photovoltaic Energy (C-1, L- 10, 5 -S/ D/ T)

Solar Radiation, availability, measurement and estimation, Solar-Earth geometry,

Solar Thermal: Solar Thermal Conversion Devices and Storage, Applications, Solar thermal energy for industrial process heating, applications of solar flat plate water heater & air heater for industrial process heat, concentrating Solar collector systems, Basic concepts & parameters, Comparison of various designs, industrial applications of concentrating collectors, Exercises in Industrial Applications, Utilization of solar thermal energy.

Solar Photovoltaics: Solar Photovoltaic effect - Principle of direct solar energy conversion into electricity in a solar cell. Solar cell, p-n junction, structure, PV module performance, I-V characteristics of a PV module, maximum power point, cell efficiency, fill factor, effect of irradiation and temperature. Classification of PV systems and components, Distributed PV System, Stand alone PV system, grid Interactive PV System, small system for consumer applications, hybrid solar PV system, concentrator solar photovoltaic. System components - PV arrays, inverters, batteries, charge controls, net power meters, PV system applications.

Module 02: Wind Energy (C-1, L- 10, 5 -S/ D/ T)

Wind Energy: Basics and Power Analysis, Wind resource assessment, Power Conversion Technologies and applications, Wind Power estimation techniques, Principles of Aerodynamics of wind turbine blade, Various aspects of wind turbine design, Wind Turbine Generators: Induction, Synchronous machine, constant V and F and variable V and F generations, Reactive power compensation. Site Selection, Concept of wind farm and project cycle, Cost economics and viability of wind farm.

Module 03: Geothermal, Tide and Wave Energy (C-0.5, L- 05, 5 -S/ D/ T)

Geothermal Energy: Availability of Geothermal Energy-size and Distribution, Recovery of Geothermal Energy, Various Types of Systems to use Geothermal Energy, Direct heat applications, Power Generation

using Geothermal Heat, Sustainability of Geothermal Source, Status of Geothermal Technology, Economics of Geothermal Energy.

Tidal Energy: Introduction, Origin and Nature of Tidal Energy, Advantages of Tidal Energy, Limitations of Tidal Energy, Tidal Energy Plant, Energy Potential Estimation, Ocean Tidal Energy Conversion Schemes (Single Basin: Single Effect, Single Basin: Double Effect, Two Basin: Linked Basin, Two Basin: Paired Basin and Tidal Flow or Tidal Current), Global Scenario of Tidal Energy, Tidal Power Development in India

Wave Energy: Introduction, Advantages and Disadvantages of Wave Energy, Power in Waves, Wave Energy Technology (Heaving Float Type Devices, Pitching Type Devices, Heaving and Pitching Float Type Devices, Oscillating Water Column Type Devices and Surge Devices), Global Scenario of Wave Energy, Tidal Power Development in India

Ocean Thermal Energy: Introduction, Origin of Ocean Thermal Energy Conversion and Efficiency, Ocean Thermal Energy Conversion Technology (Open Cycle/Claude Cycle Plant, Closed Cycle/Anderson Cycle Plant, Advantages and Disadvantages of Ocean Thermal Energy Conversion

Global and Indian Status of Ocean Thermal Energy Conversion

Module 04: Industrial and Urban Waste & Waste Energy Recovery (C-0.5, L- 05, 5 -S/ D/ T)

Industrial waste, Waste and effluent treatment, Waste as a source of energy: Industrial, domestic and solid waste as a source of energy.

REFERENCE BOOKS:

16. Partain L.D., Fraas L.M., "Solar Cells and Their Applications", 2nd ed., Wiley, 2010.

EN 213: ENERGY AUDIT AND ENERGY MANAGEMENT-I (4 Credits)

Module 01: Instruments used for Energy Audit Measurements (C-1, L- 10, 5 -S/ D/ T)

Ultrasonic water flow meters, Anemometers, Pressure Gauges, Manometers , Thermometers: All types, Power Quality Analyzers and loggers, Infrared Thermometers, Lux meter, Pitot Tubes, Flue gas Analyser: Chemical and Electronic types, Tachometers: Contact and non-contact type, Humidity measurement devices

Module 02: Measurement methods for each in Audit instrument section (C-1, L- 10, 5 -S/ D/ T)

Techniques, Where to measure, Things to Do, Precautions

Module 03: Auditing of energy generating and using systems and equipment(C-1,L- 10,5 -S/ D/ T)

Boilers and Heat Generation; Furnaces; Steam Distribution, Usage and Condensate; Compressed Air; Motors and Transformers; Electrical Distribution and Cabling; Refrigeration; Air Conditioning; Pumps; Fans and Blowers; Cooling Towers; Heat Exchangers; DG Sets; Steam Turbines; Gas Turbines; Building Energy Systems

Module 04: Testing and Calculation (C-1, L- 10, 5 -S/ D/ T)

Reference Books

- [1] Energy Management, Audit and Conservation" by Barun Kumar De
- [2] Guide to Energy Management" by Barney L
- [3] Fundamentals of Energy Conservation and Audit" by Agarkar Santosh Vyankatro and Mateti Naresh Kumar
- [4] Industrial Energy Conservation (UNESCO Energy Engineering)" by Charles M Gottschalk

EN 225: ENERGY LABORATORY II (C-4) (Any 10 Experiments)

- [1] Study of solar Concentrators
- [2] Study of solar hot water systems (FPC and ETC)
- [3] Study of solar hot air collector/ solar dryer.
- [4] Performance evaluation of box type and concentrating type solar cooker.
- [5] Study of heat pipe
- [6] Characteristics of SPV system.
- [7] Determination of efficiency of DC/AC inverter.
- [8] Study of Lead Acid Battery as a energy storage.
- [9] Study of Performance of Solar pump.

[10] Flue gas analysis of petrol, diesel and LPG Engines.

[11] **a)** Find COP of 1.5 TR window / Split AC. **b)** Find COP with Heat Balance method. **c)** Effect of Condenser coding on COP of AC. **d)** Effect of desuperheater (Hot water generation)

[12] Performance ratio of grid tied PV

EN 231: DATA ANALYTICS (ELECTIVE COURSE) (4 Credits)

Please add the contents

Module-01: Basic data & variables (C-1, L- 10, 5 -S/ D/ T)

Significance of Data, Analyzing Data, Identify Types of Data Variables, Summarizing data, Identify Measures of central tendency, Describe Measures of spread, Identify Skew-ness of data distribution, Data Collection and Management Framework, Data Collection, Data Dictionary, Outlier Treatment, Missing Value Imputation. Standardization of scores, Standard Deviation, Standard Scores Data distribution, Normal Distribution, Hypothesis Testing- Developing Null and Alternative Hypotheses, Type I and Type II Errors One-Tailed Tests About a Population Mean Two-Tailed Tests About a Population Mean. Introduction to Data Structure in R

Module 02: Analysis of data (C-1, L- 10, 5-S/ D/ T)

What is Regression? Covariance & Correlation, Features of r (correlation), Testing the significance of the correlation coefficient, Types of regression analysis, Purpose of regression analysis, Purpose of regression analysis, R^2 coefficient determination, Coefficient of determination (R^2) and Adjusted R^2 , Multiple Linear Regression, Typical Applications of Regression Analysis, Residual Analysis. Multi-collinear, Heteroskedasticity. Case Study with R.

Logistic Regression Basics, Generalized Linear Model (glm), What is logistic regression ? Types of logistic regression analysis, Applications of logistic regression analysis ,Prerequisite / when & why binary logistic regression. What is clustering?, When to use cluster analysis? Application of cluster analysis, Types of cluster analysis , K means (In detail), What is decision tree? Why decision tree? Types of decision tree Constructing decision tree, Random forest and CART (In detail) Case Study with R.

Module 03: Analysis tools and programming (C-1, L- 10, 5 -S/ D/ T)

Introduction to analytics & different terms of analytics. Need of Analytics. Analytics vs analysis, Intelligence vs Data Science, Data Analyst Vs Business Analyst, Types of Analytics, Tools for Analytics Latest. Trends of analytics Business Analytics in Practice-Asset Health Analytics, Supply Chain Analytics, Operational Analytics, HR Analytics, Financial Analytics, Marketing Analytics, Text Analytics.

What is Time series, Components of Time Series, Techniques for forecasting- Simple Moving Average ,Weighted Moving Average, Simple Exponential Smoothing, Double Exponential Smoothing, Triple Exponential Smoothing, Time Series Models Comparison, Use Cases, Industry Applications, Basic Concepts (acf, pacf, AR, MA), ARMA Model, ARIMA Model ,Industry Applications. Case Study with R

What is R? Data science & R, Components of R, Installing R, Using command line in R, Introduction to R Studio (IDE), Finding Help & solving issues in R, Data types in R, Program Structure in R, Flow Control : For loop, If condition, While conditions and repeat loop , Debugging tools, Concatenation of Data, Combining Vars , cbind, rbind, Sapply, apply, tapply functions, Built - in functions in R, File operations in R, Reading file, Writing to a file, Importing and exporting a file, Vectors, Lists, Scalars, Data Frames, Matrices, Arrays, Factors, Use of data structures in different conditions

EN 232: ADVANCED SOLAR THERMAL & PHOTOVOLTAICS (ELECTIVE COURSE) (4 Credits)

Module 01: Solar Radiation (C-1, L- 10, 5 -S/ D/ T)

Nature of Solar Radiation, Global, Beam and Diffuse Radiation, Hourly, Daily and Seasonal variation of solar Radiation, Estimation of Solar Radiation, Measurement of Solar Radiation.

Module 02: Photo Thermal Systems (C-1, L- 10, 5 -S/ D/ T)

Flat Plate Collector, Hot Air Collector, Evacuated Tube Collector, Parabolic , Compound Parabolic and Fresnel Solar Concentrators, Central Receiver System, Thermal Analysis of Solar Collectors Performance

of Solar Collectors, Solar Water Heating Systems(Active and Passive), Solar Space Heating and Cooling Systems, Solar Industrial Process Heating Systems, Solar Dryers and Desalination Systems, Solar Thermal Power Systems.

Module 03: Photovoltaic Systems (C-1, L- 10, 5 -S/ D/ T)

Solar Cells and Panels, Performance of Solar Cell, Estimation of Power Obtain From Solar Power, Solar Panels PV Systems, Components of PV Systems, Performance of PV Systems, Design of PV Systems, Applications of PV Systems, Concentrating PV Systems, PV Power Plants, Power Plant with Fuel Cells

Module 04: Design, Modeling and Economic Analysis of Solar Energy Systems

(C-1, L- 10, 5 -S/ D/ T)

F Chart Method, ϕ -F Chart method, Utilizability Modeling and Simulation of Solar Energy Systems, Life Cycle Analysis of Solar Energy Systems, Time Value of Money, Evaluation of Carbon Credit of Solar Energy Systems,

Distribution of Credits and Modules

Course Code	Course Title and Modules	Credits
EN-311	Energy Auditing and Management II	4
	Module 01: Opportunities for Saving Energy	1
	Module No.2: Energy Audit Management	1
	Module No.3: Company Energy Policies & Monitoring, Verification and Targeting	1
	Module No.4: Financial Analysis & Communication, Reporting, Training and Project Management	1
EN-312	Assessment of Thermal Energy Systems	4
	Module No.1: Cogeneration and Trigeration	1
	Module No.2: Steam Boilers,Furnaces , Heat Pumps	1
	Module No.3: Hot Oil,Water, Air Systems	1
	Module No 4: Waste Heat Recovery	1
EN-313	Steam Utilization	4
	Module No.1: Properties of Steam	1
	Module No.2: Steam Distribution	1
	Module No 3: Steam Heating	1
	Module No 4: Steam Storage & Saving	1
EN-321	Industrial/laboratory training (Mini Project)(Compulsory Course)	4
Elective Courses(Any One)		
EN-331	Wind Energy Systems	4
	Module 1: Wind Energy Fundamentals	1
	Module 2: Wind Turbines Technology and Components of MW series WTGs	1
	Module 3: Modern Wind Turbine Control and Monitoring System	1
	Module 04: Concept of Wind Farms and Project Cycle and Cost Economics	1
EN-332	Waste to Energy	4
	Module 01: Basics	1
	Module 02: Combustion and Gasification Technology	1
	Module 03: Pyrolysis Technology	1
	Module 04: Introduction to Energy from Waste (MSW)	1
EN-333	Energy Storage	4
	Module 01: Fundamentals of Energy Storage Systems	1
	Module 02: Types of Energy Storage Systems	1
	Module 03: Operation and Maintenance of Energy Storage Systems	1
	Module 04: Other Energy Storage Systems and Econometric Analysis of Energy Storage Systems	1

SYLLABUS FOR SEMESTER-III

EN 311: ENERGY AUDIT AND ENERGY MANAGEMENT II (4 Credits)

Module 01: Opportunities for Saving Energy (C-1, L- 10, 5 -S/ D/ T)

Efficiency Norms for Energy Generation and Equipments using Energy.

Boilers and Heat Generation; Furnaces; Steam Distribution, Usage and Condensate; Compressed Air; Motors and Transformers; Electrical Distribution and Cabling; Refrigeration; Air Conditioning; Pumps; Fans and Blowers; Cooling Towers; Heat Exchangers; DG Sets; Steam Turbines; Gas Turbines; Building Energy Systems.

Module 02: Energy Audit Management(C-1, L- 10, 5 -S/ D/ T)

Types of Energy Audit: Walk through Audit, Detailed Audit, Investment grade; Planning for Energy Audits; Conducting the Audit: Pre Audit Activities, Pre Audit Visit, Actual data collection, Analysis, Draft Report, Discussion with Client; Final Report; Further Analysis; Report Submission; Role of Codes and Standards: Government Standards, Industry Association Standards, International Standards, Industry norms

Module 03: Company Energy Policy,Monitoring, Verification and Targeting (C-1, L- 10, 5 -S/ D/ T)

What, How and Where to measure; Converting Measurements into information; Assessment of Energy Conservation measures; Establishing targets.

Key Elements in a Policy; How to develop a policy; Sample Energy Policies; Organization for Energy Efficiency in a given industry: Organization Structure, Position of Energy Manager, Role, duties and authority of Energy Manager, Accounting Systems

Module 04: Financial Analysis,Communication, Reporting, Training and Project Management (C-1, L- 10, 5 -S/ D/ T)

Non-discounted and discounted cash flow methods; Sensitivity analysis; Life of a project; Risk Analysis; Risk mitigation; Financial Impact of Energy Saving; Contracting: Performance contraction, Facility Management

Communication and Reporting: Energy Reports to various levels in the organization; Internal communication of Energy related issues; External Communication

Training: Whom to train; Contents of Training: How to train

Project Management: Project Planning; Budgeting; Scheduling; Progress evaluation; Quality assurance; Commissioning; Documentation; Closure and hand over

Reference Books

- [1] Energy Management, Audit and Conservation” by Barun Kumar De
- [2] Guide to Energy Management” by Barney L
- [3] Fundamentals of Energy Conservation and Audit” by Agarkar Santosh Vyankatro and Mateti Naresh Kumar
- [4] Industrial Energy Conservation (UNESCO Energy Engineering)” by Charles M Gottschalk

EN-312: ASSESSMENT OF THERMAL ENERGY SYSTEMS (4 Credits)

Module 01: Cogeneration and tri-generation (C-0.5, L- 05, 5 -S/ D/ T)

Definitions; Principle; Topping cycles; Bottoming Cycles; Combined cycles; Examples of each type of cycles

Module 02: Steam Boilers, Furnaces and Heat Pumps (C-0.5, L- 05, 5 -S/ D/ T)

Heat sources; Equipment types; Advantages; Disadvantages; Applications

Types of furnaces; Applications; Construction; Refractories and Insulation; Energy Balance

Types of heat pump; Principle of operation; Features; Efficiencies; Applications

Module 03: Hot oil, Water and Air Systems (C-1, L- 10, 5 -S/ D/ T)

Heat sources; Equipment types; Advantages; Disadvantages; Applications

Module 04: Waste Heat Recovery (C-1, L- 10, 5 -S/ D/ T)

Methods; Requirements; Applications; Efficiency; Problems

EN 313: STEAM UTILIZATION (4 CREDITS)

Module 01: Properties of Steam (C-0.5, L- 05, 5 -S/ D/ T)

Heating properties of steam, Power properties of steam, combined power and heating The Efficient Use of Steam

Module 02: Steam Distribution (C-0.5, L- 05, 5 -S/ D/ T)

Pipe Sizing, Insulation, Layout, Steam Quality, Steam Traps, Condensate handling, Air and its removal

Module 03: Steam Heating (C-1, L- 10, 5 -S/ D/ T)

Indirect heating, Evaporation, Direct heating, Flash steam and low pressure vapor, Peak loads, Heat storage, Accumulators

Module 04: Steam Storage and Saving (C-1, L- 10, 5 -S/ D/ T)

Multiple effect evaporation, Steam circulation and pressurized hot water, Economizers

How to set about steam saving.

Reference Books

- [1] The Steam Engineer's Handbook: A Convenient Reference Book, for All Persons Interested in Steam Boilers, Steam Engines, Steam Turbines, and the Machinery of Power Plants (Classic Reprint) Paperback – April 18, 2018 by International Correspondence Schools (Author)

EN 317: INDUSTRIAL/LABORATORY TRAINING (MINI PROJECT) (4 Credits)

The Industrial Training should be carried out in a Industry or Research Laboratory engaged in the R & D activities in Energy Field. The NGO's undertaking pilot projects in the Field of Energy can also impart training to the M. Tech student. The training shall be for a period of six weeks and student should spend approximately 100 hours on training. A brief report of training activities certified by authorities imparting training shall be submitted at least one month before the end of semester.

The assessment of training shall be done as follows.

- 1) Evaluation by Training Institute of Student- 1 Credit (50 Marks)
- 2) Mid-Term Evaluation of Training (including Energy Awareness program)-1 Credit (50 Marks)
- 3) Final Viva Voce Examination-2 Credits (100 Mark)

EN 331: WIND ENERGY SYSTEMS (ELECTIVE COURSE) (4 Credits)

Module 01: Wind Energy Fundamentals (C-1, L- 10, 5 -S/ D/ T)

Wind Energy Basics, Wind Speeds and scales, Terrain, Roughness, Wind Mechanics, Power Content, Class of wind turbines, Atmospheric Boundary Layers, Turbulence.

Wind Measurements, Analysis and Energy Estimates: Instrumentation for wind measurements, Wind data analysis, tabulation, Wind resource estimation, Betz's Limit, Turbulence Analysis

Aerodynamics Theory: Airfoil terminology, Blade element theory, Blade design, Rotor performance and dynamics, Balancing technique (Rotor and Blade), Types of loads; Sources of loads

Module2: Wind Turbines Technology and Components of MW series WTGs

(C-1, L- 10, 5 -S/ D/ T)

Wind turbines types: Vertical Axis Type, Horizontal Axis, Constant Speed Constant Frequency, Variable speed Variable Frequency, Up Wind, Down Wind, Stall Control , Pitch Control, Gear Coupled Generator type, Direct Generator Drive /PMG/Rotor Excited Sync Generator

Wind Turbine Technology and Components of WTG: 1) Gear Coupled Generator Type [Const. Speed] 2) Direct Coupled Generator Type [Variable Speed Variable Frequency]: Multipole Synchronous / PMG Generators, Gear Coupled Generator Wind Turbine Components and their construction.

Electronics Sensors/Encoder/Resolvers, Wind Measurement: Anemometer and Wind Vane, Grid Synchronization System, Soft Starter, Switchgear [ACB/VCB], Transformer, Cables and assembly. Compensation Panel, Programmable Logic Control, UPS, Yaw and Pitch System: AC Drives, Safety Chain Circuits, Generator Rotor Resistor controller (Flexi Slip), Differential Protection Relay for Generator, Battery/Super Capacitor Charger and Batteries/ Super Capacitor for Pitch System, Transient Suppressor / Lightning Arrestors, Oscillation & Vibration sensing.

Direct Rotor Coupled Generator (Multipole) [Variable Speed, Variable Freq.]

Excited Rotor Synch. Generator/PMG Generator, Control Rectifier, Capacitor Banks, Step Up / Boost Converter (DC-DC Step Up), Grid Tied Inverter, Power Management, Grid Monitoring Module (Voltage and Current), Transformer, Safety Chain Circuits

Doubly Fed Induction Generator and Power Control

Module3: Modern Wind Turbine Control and Monitoring System (C-1, L- 10, 5 -S/ D/ T)

Details of Pitch System and Control Algorithms, Protections used and Safety Consideration in Wind turbines, Wind Turbine Monitoring with Error codes, SCADA and Databases: Remote Monitoring and Generation Reports, Operation and Maintenance for Product Life Cycle, Balancing technique (Rotor & Blade), FACTS control and LVRT & New trends for new Grid Codes.

Module 04: Concept of Wind Farms and Project Cycle and Cost Economics (C-1, L- 10, 5 -S/ D/ T)

Project planning, Site selection, Project execution, Operation and maintenance, Environmental concerns: Pollution free power; Noise; birds; Aesthetics; Radio waves interference; Rainfall
Cost Economics: Wind resource assessment and R & D costs, Fixed and variable costs, Value of wind energy, Life cycle costing and cash flow of wind power projects, Wind project owners / developers, Wind energy market

- [5] Prepared by WISE: Wind Power in India (5000MW BY 2015)
- [6] B.H.Khan: Non-Conventional Energy Sources

EN 332: WASTE TO ENERGY (ELECTIVE COURSE) (4 Credits)

Module 01: Basics (C-1, L- 10, 5 -S/ D/ T)

Definition of chemical and physical properties and characteristics of MSW a Fuel Comparison to conventional fuels (coal, oil, and natural gas), Resource characterization and assessment, Principles of thermochemical conversion processes: Pyrolysis, Gasification, and Combustion

Module 02: Combustion and Gasification Technology (C-1, L- 10, 5 -S/ D/ T)

Description of main combustion technology, Design of combustion, Co-firing, Energy conversion systems and CHP

Description of main gasification technology, Design of gasification, Definition of synthesis gas (producer gas), Co-gasification and IGCC

Module 03: Pyrolysis Technology (C-1, L- 10, 5 -S/ D/ T)

Description of main pyrolysis technology, Slow pyrolysis for char production, Fast pyrolysis for bio-oil production, Bio-oil upgrading

Module04: Introduction to Energy from Waste (MSW) (C-1, L- 10, 5 -S/ D/ T)

Characterization and classification of waste as fuel – agrobased, forest residues, industrial waste, Municipal solid waste.

Waste to energy options: combustion (unprocessed and processed fuel), gasification, anaerobic digestion, fermentation, pyrolysis

Understand the properties (physical, chemical, and biological) commonly associated with Municipal Solid Waste (MSW) and integrate them into waste management calculations

MSW segregation technologies and by products

Landfill technology and limitations

Conversion devices: combustors (Spreader Stokes, Moving grate type, fluidized bed), gasifier, digesters.

Briquetting technology: Production of RDF and briquetted fuel.

Properties of fuels derived from waste to energy technology: Producer gas, Biogas, Ethanol and Briquettes, Comparison of properties with conventional fuels.

Power generation using waste to energy technologies: CI and SI engines. IGCC and IPCC concepts.

Landfills: Gas generation and collection in landfills, Introduction to transfer stations. Comparison with non-energy options like Vermiculture, Composting.

Demonstrate an in-depth knowledge of why and how to control, collect and treat landfill gas (LFG).

Appraise the parameters contributing to LFG production and composition, the risks and production controls and calculate their potential impact

Evaluate specific process parameters critical to the design of non-landfill treatment processes (e.g. thermal destruction efficiencies; flue gas desulphurisation requirements)

Apply process science and engineering (PSE) knowledge in describing key issues regarding emissions, treatment and performance of non-landfill technologies.

EN 333: ENERGY STORAGE(4 Credits)

Module 01: Fundamentals of Energy Storage Systems (C=0.5, L = 05)

Introduction and Fundamentals of energy storage, energy density, power density; Electrochemical storage components; Supercapacitors; Hydraulic storage; Flywheels; Compressed air energy storage; Pumped Hydro Storage, Transportation, mobile applications; Power electronics and grid-connected systems; Grid

stability and grid management, concept of load dispatch centre, effect of renewable integration in to grid. Overview of energy storage technologies: Thermal, Mechanical, Chemical, Electrochemical, Electrical. Efficiency of energy storage systems. Electrical energy storage: Batteries, Super capacitors, Superconducting Magnetic Energy Storage (SMES), charging methodologies, SoC, SoH estimation techniques. Hydrogen production and storage, fuel cells.

Module 02: Types of Energy Storage Systems (C=0.5, L=05)

Mobile storage system: electric vehicle, G2V, V2G. Hybrid Energy storage systems: configurations and applications. Storage for renewable energy systems: Solar energy, Wind energy, Pumped hydro energy, fuel cells. Energy storage in Microgrid and Smart grid. Energy Management with storage systems, Increase of energy conversion efficiencies by introducing energy storage.

Module 03: Operation and Maintenance of Energy Storage Systems (C=0.5, L=05)

Simulation of energy storage systems and its management, smart park, Electric Vehicle charging facility, HESS in microgrid and smart grid, microbial fuel cell, hydrogen fuel cell and so on.

Module 04: Other Energy Storage Systems and Econometric Analysis of Energy Storage Systems (C=0.5, L=05)

Performance advantages and disadvantages of lead acid batteries, Inadequacy of existing technologies, Next generation of li-based batteries, Battery Management System (BMS), Electric Vehicles battery considerations. Hybrid Charging (grid and solar photovoltaic). ROI and Project Analysis involving Energy Storage Systems.

Semester-IV		
Course Code	Course Title	Credits
EN-421	Industrial / Research Project (Major Project)	16
Elective Courses		
EN-431	Research Paper	4

SYLLABUS FOR SEMESTER-IV

EN 421: INDUSTRIAL/RESEARCH PROJECT(Major Project)(15 Credits)

Industrial Project or Research Project equivalent to 25 Credits shall be completed by the student during fourth semester. A project report giving details of work done under the project should be submitted one month before the end of the semester. The project work shall be monitored by internal guide and / or a authorized / qualified person from the industry where student is doing the work.

The topic of the project and work-plan shall be approval by the internal committee formed under the chairmanship of Director, School of Energy Studies. Mid-Term and pre-submission viva-voce examination shall be compulsory to every student.

Distribution of Credits and Marks

Course Code	Course Title	Credits	Duration	Marks		Total Marks
				Internal	External	
EN 421	Industrial Project or Research Project	15	5 Months or 18-20 weeks	200	200	400

Distribution of Credits for Industrial Project or Research Project shall be as follows:

- 1) **Selection of Topic and Work-Plan** :2.0 Credits, 50 Marks
- 2) **Mid-Semester presentation** :2.0 Credits, 50 Marks
- 3) **Pre- Submission Presentation** :2.5 Credits, 100 Marks
- 4) **Find Viva- Voce Examination** :7.5 Credits, 200 Marks

EN 431: RESEARCH PAPER (ELECTIVE COURSE) (6 Credits)
